Career Objective

Aspiring Computer Science student with strong proficiency in Python, MySQL, HTML, CSS, and JavaScript, along with hands-on experience in machine learning and web development projects. Passionate about both frontend and backend development, with a keen interest in designing and building scalable, efficient, and user-friendly web applications. Eager to learn new technologies, adapt to dynamic environments, and contribute effectively to team-based projects while continuously improving technical and problem-solving skills.

Education

- **Adichunchanagiri Institute of Technology** — Chikkamagaluru, Karnataka
  Bachelor of Engineering in Computer Science — *Dec 2022 – May 2026*
  CGPA: 8.9
- **St Norbert PU College** — Koppa, Chikkamagaluru, Karnataka
  PCMB 2nd PUC — *Aug 2020 – May 2022*
  Percentage: 96
- **Jyothir Vikas Eng Med School** — Chikkamagaluru, Karnataka
  SSLC — *Aug 2019 – May 2020*
  Percentage: 95

Skills Summary

- **Languages**: Python
- **Web Technologies**: HTML, CSS, JavaScript
- **Frameworks**: Scikit, TensorFlow, Keras, Open CV
- **Database**: MySQL
- **Platforms**: Visual Studio Code, Github
- **Soft Skills**: Leadership, Communication, Time Management, Fast Learning

Experience

- **Data Science Intern** — Onsite
  Palle Technologies, Bangalore — *Jan 2026 - May 2026*
  - Learning and implementing basic to adavance Python, MySQL and Machine Learning.
  - Collaborated with peers and mentors to follow industry-level coding standards and best practices.
  - Improving problem-solving, coding, debugging and software development skills.

Projects

- **Deep Learning Techniques for Fish Diseases Detection And Classification (HTML, CSS, Machine Learning, Python)**:
  - Developed a machine learning-based system to detect and classify fish diseases using image data.
  - Utilized a pre-trained VGG16 model for feature extraction and implemented a Support Vector Machine (SVM) classifier for accurate disease prediction.
  - Processed and analyzed RGB image datasets using OpenCV to enhance model performance and accuracy.
  - Implemented the system using Python with libraries such as TensorFlow/Keras and Scikit-learn.
  - Designed a simple and user-friendly interface using HTML and CSS to display predictions.
  - Achieved fast and reliable disease detection to support aquaculture monitoring and early diagnosis. (Dec 2025)
- **Weather Forecast (HTML, CSS, JavaScript, OpenWeatherMap API)**:
  - Developed a responsive weather forecasting web application to display real-time and 5-day forecast data for any city.
  - Integrated OpenWeatherMap API to fetch dynamic data including temperature, humidity, wind speed, and weather conditions.
  - Designed an interactive and user-friendly interface using HTML, CSS, and Bootstrap.
  - Implemented dynamic data rendering and API handling using JavaScript and Fetch API.
  - Ensured efficient performance and smooth user interaction through optimized frontend logic. (Jan 2025)

Certificates

- Certificate of presentation in 2025 IEEE 4 ICONAT during 19 to 21 sep 2025
- Machine Learning - NPTEL
- Internship Certificate on Data Science - Palle Technologies
- Participation Certificate of 24 hr Hackathon
- Participation Certificate of CSS Battle
